

## **Alexandra Tew** Analytics Engineer | SQL | Snowflake | Data Pipeline Development

Charlotte, NC | alex.d.tew@gmail.com | 919-604-7541 | alexandratew.io | linkedin.com/in/alexandratew

Analytics Engineer with experience designing and maintaining SQL-driven data pipelines in Snowflake supporting operational analytics across enterprise-scale datasets. Skilled in debugging complex data systems, reconciling multi-source environments during platform migrations, and building transformation layers to convert raw data into reliable analytical models. Combines systems thinking, SQL engineering, and data validation expertise to improve reliability and transparency of production data workflows.

**Technical Skills:** SQL, data modeling, ELT, data pipeline orchestration, query optimization and restructuring, dataset validation and reconciliation frameworks, Python, Version Control (Git)

**Tools & Platforms:** Snowflake, Streamlit, Tableau, Power BI, Alteryx, SQL Server, Microsoft Azure

### **Coca-Cola Consolidated - Charlotte, NC** | Analytics Engineer (BI Developer II) | Dec 2023 - Present

- Serve as the primary analytics partner for operations, safety, treasury, procurement, cost accounting, and environmental affairs teams, translating complex business processes and compliance requirements into reliable data models, reporting, and analytics tools.
- Played a key role in Red Classic's migration from Matillion to DBT, validating and reconciling data across 40+ source tables, 200+ views, and 20+ workflows supporting critical business reporting.
- Developed SQL-based transformation frameworks, automated workflows, and data quality checks that improved reliability and consistency of downstream reporting assets.
- Investigated complex data discrepancies across source systems, business processes, and reporting layers, partnering with stakeholders to identify root causes and establish trusted metrics.
- Built internal Python and Streamlit applications that streamlined data ingestion, validation, and operational analysis workflows.
- Improved performance and maintainability of enterprise reporting solutions through query optimization, model redesign, and migration of legacy transformation logic into Snowflake-native architecture.
- Developed AI-assisted data extraction and classification workflows using large language models, reducing manual processing effort and improving the usability of unstructured business data.

### **Dornburg Lab - Charlotte, NC** | Statistical Data Analyst | Jan 2021 - Dec 2023

- Built reproducible computational pipelines and statistical models for large-scale genomic datasets in high-performance computing environments.
- Developed data pipelines using Python, Bash, and R to process large genomic and RNA-seq datasets across HPC clusters. Built reproducible workflows for sequence alignment, transformation, and model testing across large biological datasets.
- Conducted large-scale data transformation, validation, and statistical analysis supporting evolutionary biology research. Developed comparative statistical models and phylogenetic analyses used to evaluate evolutionary hypotheses.

### **AvidXchange - Charlotte, NC** | Business Intelligence Analyst Intern | Jun 2023 - Aug 2023

- Developed advanced SQL queries and analytical datasets supporting operational reporting initiatives.
- Designed Power BI dashboards with drill-through functionality and interactive filtering capabilities for internal users.
- Streamlined reporting workflows by automating data preparation processes used across multiple reporting teams.

### **Trotter Finishes - Denver, NC** | Founder & Business Manager | Jun 2017 - Dec 2020

- Founded and operated a subcontracting construction business, overseeing client relationships, project execution, hiring, scheduling, and management of a small field team.
- Managed project delivery, customer communication, budgeting, and operational planning while maintaining quality and customer satisfaction.
- Achieved 100-150% year-over-year revenue growth for two consecutive years through business development, operational efficiency, and repeat client relationships.

## **Education**

MS Bioinformatics - University of North Carolina Charlotte 2023
